Redefining stability and comfort: The latest patient-specific overdenture solution

The goal of this program is to give clinicians the latest information and tools necessary to succeed in integrating innovative edentulous treatment procedures into their practices.

You will learn the latest about friction-retained patient-specific overdenture solutions and how they are gaining popularity. The concept uses rigid telescopic principles to give your patients a pure implant-borne, palate free, removable result that is easy to clean. Integrating precision technology with today's patient's needs provides them the functionality and esthetics they demand and makes removable dentistry enjoyable again!

At the completion of this course, participants will be able to understand:

- A new alternative for the treatment of the edentulous patient; a healthier, more esthetic, and maintainable approach.
- Proper implant diagnostics: a collaborative approach.
- Step-by-step instructions for the clinical team.
- Overdenture fabrication and esthetics.

Registration

To register for this program contact **Chris Morris** at **502-558-0716** or **Chris@adldental.com**.

Please respond by Thursday, October 17 as space is limited.

If registering by email, please include the program date and location, your full name, NPI or state license #, complete address and phone number.

Featured speaker

Dr. Bryan Limmer obtained his dental degree from Harvard University in 2009. He then continued his education at the University of North Carolina by completing a three-year residency in prosthodontics, earning both a specialist certificate and master's degree in 2012. Following residency, Dr. Limmer completed an additional one-year Implant

Fellowship at the University of North Carolina.

Dr. Limmer maintains a private prosthodontic practice in Wheat Ridge, CO and holds a faculty appointment at Harvard University. He is a member of the American College of Prosthodontists and the Academy of Osseointegration. Dr. Limmer has lectured and written articles on a variety of prosthodontic topics, including edentulous therapy, zirconia biomaterials, and digital technology.
