

All fixed implant restorations are all-inclusive and will be fabricated following manufacturer protocols using only approved materials and parts. ADL does not condone the use of off-brand parts to save costs because they void the manufacturer's warranty. ADL will only use generic components if instructed to by the prescribing clinician. We have attempted to quote the procedures and restorations in this fee schedule utilizing current market pricing. From time to time, manufacturers will increase their cost and these fluctuations will be passed on to the clinician.

It is important to note that in order to obtain an accurate fee quote you must e-mail or fax ADL, attention Chris Morris, the surgical report or plan and the restorative plan. This will be evaluated and a detailed restorative quote will be finalized and presented to the clinician. Only then will ADL be able to accurately determine the final restorative fee.

ADL offers open payment terms (net 30) and a full credit application that must be completed prior to setting up an account with ADL. Until this is established, a major credit card must be on file before work will be accepted or returned completed. All information shared with ADL will be kept in the strictest confidence and securely stored. No personal or financial information will be shared without written consent of the information's owner. A full description of ADL's credit and remake/return policies is located on the back of every signed prescription form. ADL will only accept work from licensed clinicians and does not work with the general public in any way.
